

Skill and knowledge assessments are an essential step in progressing through your course. You may be assessed in a number of ways while you are studying at Axiom College.

Observation

- An educator will directly observe your performance of activities in a real or simulated workplace, role play or exercise, or a demonstration of practical skills.

Written Assessment

- Written assessments can take a number of forms including case studies, assignments, projects, workbooks, presentations, reports, reflective tasks, self-evaluation, and research projects. Your educator will indicate what kind of written assessment you are expected to submit for each unit.

Questioning

- Questioning could take the form of written question and answers, such as examinations, tests or quizzes. It could also be spoken questions and answers.

Portfolio

- A portfolio is a collection of evidence of your skills. This could include collections of samples of your work, observation checklists, third-party reports, products with supporting documentation, historical evidence, training records, and journals, logbooks or work diaries.

Work Samples

- Work samples are products or items that you produce during your studies or project work.

Third-party Feedback

- Third-party feedback is information we gather from the people training or supervising you throughout your studies. Examples of things we might gather include: interviews with employers, supervisors or peers; testimonials, reports or references from employers or supervisors; evidence of workplace training or vocational placement; and peer observation.

Recognition of Prior Learning (RPL)

- We may gather information about your skill and knowledge levels through an RPL assessment or skill recognition process.
